

EMPLOYEE MONITORING THE WAY YOU COULDN'T IMAGINE!

Our solution enables you to control all employee activities on workstation. It logs all events and information; monitors file transfer channels inside your company and data transfer to external sources.

It enables to analyze employee efficiency, determine employee's real KPIs, and provide control and protection of sensitive information, investigate incidents and reveal insiders responsible. Our solution is a bundled solution that makes your business safe and secure.

KEY BENEFITS

Automatic WORK TIME tracking

Our solution logs the beginning and the end of each employee's workday, including lunch and coffee breaks, etc. It enables executives and employees, themselves, to improve discipline at the workplace and reduce idle periods.

Work time monitoring enables user to prevent data leaks of sensitive information, visits to unproductive websites, and other unwanted activity. It shows you a clear and complete picture of each employee's activities.

SECURITY INCIDENTS investigation

Our solution is a wayback machine for your business! At any moment, you can go back in time and see what a particular employee was doing in a specified period in the past.

Constructor of multidimensional data reports enables you to receive a set of specified data on the fly. Searching by keywords and regular expressions makes incident investigation quick and easy, and microphone recording of the workstation surroundings.

EMPLOYEE EFFICIENCY evaluation and control

Our solution contains an option to monitor employee activities at a workstation. Using this option, you can log data about applications launched on each employee's workstation and the total time an employee works with each of them.

You can categorize web sites and applications that an employee uses as productive or unproductive.

You can monitor employee statistics online via admin panel or receive daily reports about the previous day's activities of specific employees or whole departments by specifying report delivery time. Reports are generated in PDF format.

PROBLEM

When managing a business, it is difficult to make business plans without seeing a whole picture of data flows, business processes, employee activities etc. that going on inside the company.

However, at present there are too many information sources, so instead of helping they prevent company executives from making sensible decisions. In addition, without clear view on this business data, the company becomes vulnerable to insider threats, data leaks, and other breaches of information security. This lack of transparency prevents the company to reach maximum efficiency and productivity.

SOLUTION

Data aggregation and analysis of employee activities at workstations solve this issue of business transparency for its executives. Work time tracking, remote administration, prevention of data leaks, and incidents investigation – all these procedures lead to evaluation of employee efficiency and tighter control over all business processes running in the company. The ultimate goal of this chain of procedures is bringing efficiency and prosperity to the company. company to reach maximum efficiency and productivity.

WHAT'S NEW

Refined graphs of anomaly detection, now with timeline

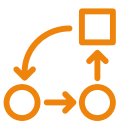

Flexible categorization of events

Improved calculation of time spent on websites

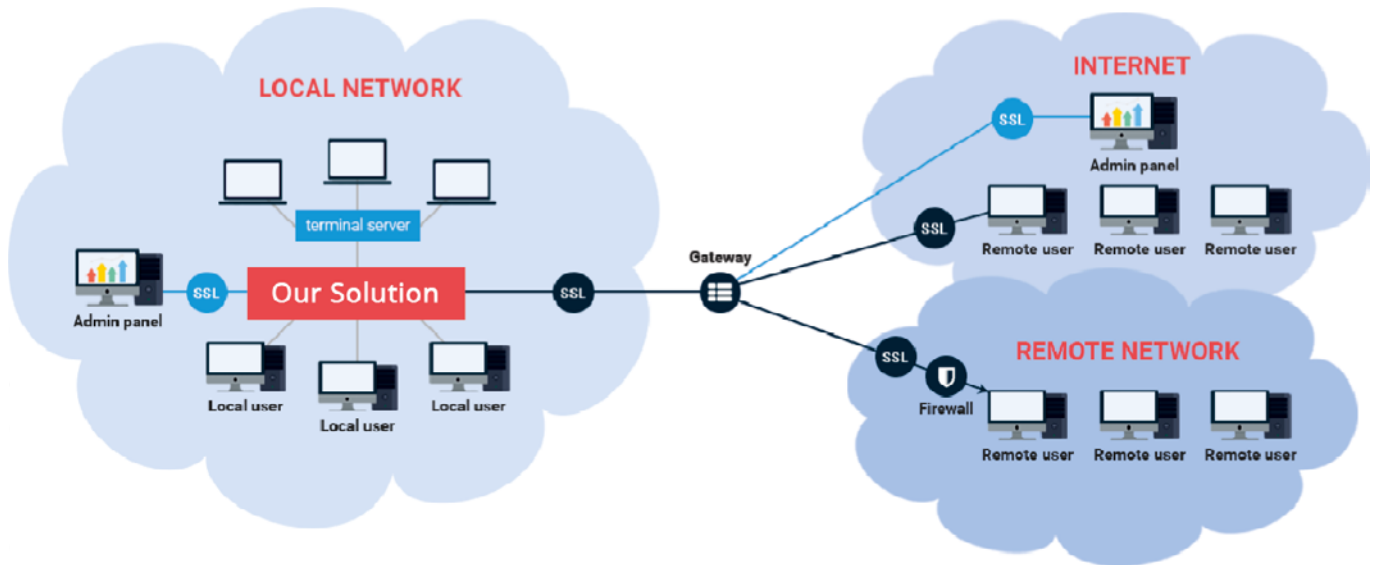

Customizable sensitivity of microphone activation;

separated active, productive and unproductive time counting

MONITORS WORKSTATIONS AND TERMINAL SERVERS IN LOCAL, DISTRIBUTED AND HYBRID NETWORKS OF ANY COMPLEXITY.

responsible. Our solution is a bundled solution that makes your business safe and secure.

LICENSING

Starting with release of our solution we are introducing two types licenses: standard and floating license.

STANDARD LICENSE

One standard software license (one license per one workstation) gives the user the right to install and use the agent module (endpoint module) on a single workstation, the license binding is made to hardware ID. The number of installations on the same workstation (i.e. workstation with the same hardware ID) is not limited.

NOTE: Workstation's hardware ID can be changed when workstation hardware is replaced or if OS Windows is replaced on monitored workstation. In this case, another standard license with new Activation key have to be issued.

FLOATING LICENSE

One floating license gives the user the right to install and use the agent module (endpoint module) on a single workstation, the license is assigned to hardware ID. But unlike the case with standard license, if necessary the user is able to "free" this license and activate the agent installed on another workstation with another hardware ID.

Both types of StaffCop licenses have perpetual time span. This means that you can use the product for which you have purchased StaffCop license for as long as you like. When you make an order for required number of licenses, we provide you with single activation key for all the licenses included in that order.

MONITOR, CAPTURE OR BLOCK ANY ACTIVITY:

- Keylogger
- Document operations
- Desktop Viewer & Screenshots
- System & Applications usage
- Websites & Online searches
- USB devices & storages
- Chats & Emails
- Webstorage Access
- Documents in print
- Network activity
- Microphone & Webcam
- Social networks
- Clipboard & File operations

HANDY TOOLS FOR ANALYTICS

- ✓ Relations graph
- ✓ Heatmap
- ✓ Anomalies graph
- ✓ Content analysis
- ✓ Threats Analyzer
- ✓ Notifications and alerts system
- ✓ User vocabularies
- ✓ Predefined filters

SYSTEM REQUIREMENTS

Agent

Windows 10, 8, 7, Vista;
Windows Server 2003, 2008, 2012
CPU: Core2Duo 2.2 Ghz;
RAM: 2 Gb; HDD: from 5 Gb.

Server

GNU/Linux 64-bit (Ubuntu, Debian);
Can be installed on virtual machines;
CPU: Quad Core 2.4GHz;
RAM: 8 Gb; HDD: from 10Gb.
(+256mb per each terminal server user)
